

Through the CMS Transforming Clinical Practice Initiative (TCPI), APA's Support & Alignment Network (SAN) was awarded \$2.9 million over 4 years to train 3,500 psychiatrists in clinical and leadership skills needed to support primary care practices that are implementing integrated behavioral health programs.

APA's SAN provides psychiatrists with **FREE training** and **up to 8 CME Credits** to train in the **Collaborative Care Model** online and at the APA Annual Meeting on May 14-18, 2015 in Atlanta, GA. APA will help connect trained psychiatrists with Practice Transformation Networks (PTNs) within their region.

What is the Collaborative Care Model (CCM)?

The CCM integrates effective psychiatric care into primary care practices. It is the only integrated care model with a clear evidence base and has been tested in more than 80 randomized controlled trials. It allows for:

- ◆ Greater professional flexibility for psychiatrists as they are able to practice part-time in the model
- ◆ Increased access for patients by allowing psychiatrists more time to care for sicker patients
- ◆ Progress toward meeting the Triple Aim of better patient outcomes, better patient and provider satisfaction, and reductions in health care costs
